PROFESSIONAL SUMMARY

Computer Science master's student building across React.js, FastAPI, Spring Boot, and Android development. Connects front-end interfaces to backend services, supporting complete product builds from layout to API integration. Comfortable moving between web, mobile, and server-side work in modern development environments.

SKILLS

Programming Languages: Java, Kotlin, Python, JavaScript, Dart, SQL

Frontend Development: React.js, HTML, CSS, Tailwind CSS, Bootstrap

Backend Development: FastAPI, Spring Boot, RESTful APIs

Mobile Development: Android (Kotlin), Jetpack Compose, Flutter, MVVM, Clean Architecture

DevOps: Docker, Docker Compose, Linux (Ubuntu), Nginx, GitHub Actions (CI/CD), DigitalOcean

EDUCATION

Master of Science: Computer Science

Mahidol University - Thailand

Expected in 08/2027

Bachelor of Science: Computer Systems Engineering

University of Sunderland - United Kingdom

02/2025

PROJECTS

Bangkok Transit – Public Railway Transportation Platform

- Developed responsive UI for a map-based railway navigation and trip planning platform.
- Integrated frontend components with backend APIs to display routes and station information.
- Collaborated on UI/UX design and backend API integration.

Court Connect – Mahidol badminton club management system

- Integrated frontend components with backend APIs to support court bookings, player sessions, wallet payments, and payment proof submission.
- Collaborated on UI/UX design, LINE integration, and backend API workflows for smoother player and organizer experiences.

Cake Store App

- Built an Android e-commerce application for browsing and purchasing cakes.
- Implemented authentication, cart management, checkout, and order tracking features.
- Utilized Firebase, Coroutines, StateFlow, and Koin for scalable architecture.

Suit Case

- Developed an Android app for creating and managing trip-based packing lists.
- Built with Kotlin, MVVM, Firebase, Koin, Coroutines, and Jetpack components.
- Implemented login, cloud sync, photo uploads, swipe actions, and shake-to-pack interaction.

Expense Tracker

- Developed a personal finance application for tracking income, expenses, and budgets.
- Implemented local data persistence and user preference management.
- Created budgeting and analytics features with reactive UI updates.

Student Performance Analysis Using Machine Learning & Statistical Testing

- Analyzed student laboratory and examination performance data to identify factors influencing academic outcomes.
- Developed machine learning models to predict student performance and evaluate key predictors.
- Visualized trends and insights to support data-driven educational decision-making.

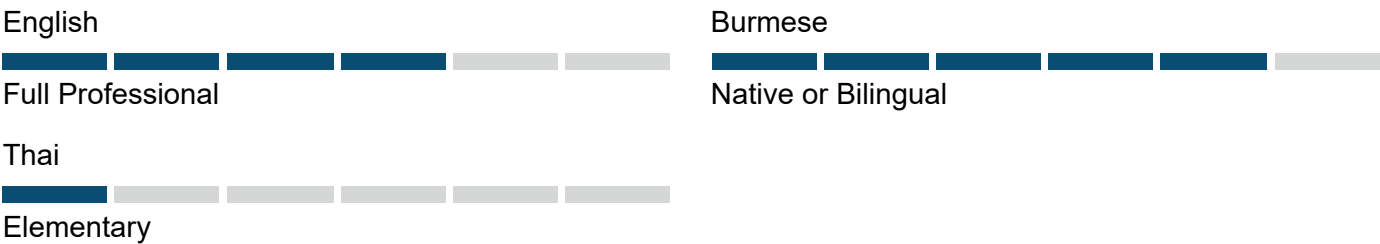

TechDebt-Hotspot

- Built a dashboard for identifying technical debt hotspots in GitHub repositories.
- Combined code churn, maintenance issues, and code smell findings into actionable insights.
- Visualized maintainability metrics to support engineering decisions.

Line Follower Autonomous Garbage Truck

- Led development of an IoT-enabled robotic waste collection system.
- Implemented line-following navigation, obstacle detection, and automated waste collection.
- Enabled remote monitoring and control through the Blynk platform.

LANGUAGE SKILLS

CERTIFICATES

- Android App Development with Kotlin - Udemy
- Create REST APIs with Spring and Java - Codecademy

CS50's Introduction to Computer Science - CS50: Harvard University

Learn Java - Codecademy

Exploring Networking with Cisco Packet Tracer

Learn Docker - Boot.dev

Learn CI/CD with GitHub Actions, Docker and Go Course - Boot.dev
