Computer Science master's student building across React.js, FastAPI, Spring Boot, Android development, and Java. Connects front-end interfaces to backend services, supporting complete product builds from layout to API integration. Comfortable moving between web, mobile, and server-side work in modern development environments.

Education

Expected in 2027-08

Master of Science: Computer Science

Mahidol University

2025-02

Bachelor of Science: Computer System Engineering

University of Sunderland

Skills

Programming Languages: Java, Kotlin, Python, JavaScript, Dart, SQL

Frontend Development: React.js, HTML, CSS, Tailwind CSS, Bootstrap

Backend Development: FastAPI, Spring Boot, RESTful APIs

Mobile Development: Android (Kotlin), Jetpack Compose, Flutter, MVVM, Clean Architecture

DevOps: Docker, Linux (Ubuntu), Nginx, GitHub Actions (CI/CD), DigitalOcean

Projects

Bangkok Transit – Public Railway Transportation Platform

- Developed responsive UI for a map-based railway navigation and trip planning platform.
- Integrated frontend components with backend APIs to display routes and station information.
- https://bangkoktransit.onrender.com

Court Connect – Mahidol badminton club management system

- Integrated frontend components with backend APIs to support court bookings, player sessions, wallet payments, and payment proof submission
- Collaborated on LINE integration, and backend API workflows for smoother player and organizer experiences.
- https://cconnect.tspdigital.solutions

Suit Case

- Developed an Android app for creating and managing trip-based packing lists and Implemented login, cloud sync, photo uploads, swipe actions, and shake-to-pack interaction.
- https://github.com/pyaestk/Suit-Case

Student Performance Analysis Using Machine Learning & Statistical Testing

- Analyzed student laboratory and examination performance data to identify factors influencing academic outcomes.
- Developed machine learning models to predict student performance and evaluate key predictors, Visualized trends and insights to support data-driven educational decision-making.

TechDebt-Hotspot

- Built a dashboard for identifying technical debt hotspots in GitHub repositories and Combined code churn, maintenance issues, and code smell findings into actionable insights, Visualized maintainability metrics to support engineering decisions.
- https://github.com/pyaestk/Techdebt-hotspot

Line Follower Autonomous Garbage Truck

- Led development of an IoT-enabled robotic waste collection system.
- Implemented line-following navigation, obstacle detection, and automated waste collection, Enabled remote monitoring and control through the Blynk platform.
- https://youtu.be/Z_S7mKZLvr8?si=AIdOmpmlI5uHrAkM&t=96

Certifications

Android App Development with Kotlin - Udemy

Create REST APIs with Spring and Java - Codecademy

CS50's Introduction to Computer Science - CS50: Harvard University

Exploring Networking with Cisco Packet Tracer

Learn CI/CD with GitHub Actions, Docker and Go Course - Boot.dev

Language Skills

English	Full Professional
Burmese	Native or Bilingual
Thai	Elementary

Soft Skills

- Problem-solving through software, data, and debugging projects
- Self-learning mindset with experience learning new tools independently
- Comfortable working in English and multicultural environments
- Team collaboration through academic and client-based projects
- Responsible, organized, and willing to take ownership of tasks
